

# THERE. NOW YOUR GUIDE IS RIGHT SIDE UP.

Dave lives by the motto, "If it ain't broke, don't fix it." So when this Washington Plant Manager inherited a 15-year-old Fife guide, he decided to see if he could use it instead of purchasing a new one. Dave installed the guide, but for

some reason, it just wasn't working quite right.

Knowing there's a number of ways a guide can

be installed, and being the do-it-yourselfer that

he is, Dave put his mind to solving the problem

and contacted his local Fife guy, Craig

Inspiration struck. To connect the web path

Dave simply ripped the guide upside-down

Now, he chuckles, "it's the best guiding system

in the plant." A little bit of ingenuity and

Fife longevity solved the problem. If Dave and

Fife turned this problem into success, just

think of what you can do with Fife as your

partner. Head to [www.fife.com/reliable](http://www.fife.com/reliable) and put

reliability on your side.
